

1. Test Overview

The purpose of this test plan is to verify core functionalities of Navigator.ba, focusing on smoke tests, positive cases, and negative test scenarios. The plan includes tests for object creation, search functionality, page navigation, feedback submission, and UI interactions.

2. Test Scope

1. Validate critical workflows (Smoke tests)
2. Ensure positive test cases behave as expected
3. Verify negative scenarios are handled properly

3. Execution strategy

Automated Smoke Tests (High Priority)

- Find_Object
- Test_Navigator_LandingPage
- Page_Load
- Categories_Functionality

Automated Regression Tests (Once Issues are Fixed)

- Create_Object
- Send_Feedback

Manual Tests (Less Critical UI Components)

- SocialMedia_Icon
- GooglePlay_Icon
- Long_Input
- Create_Object_With_MissingData

4. Test Cases

Test Case ID / Type of test	Create_ Object / Smoke, Positive
Description	Testing the creating of an object
Preconditions	User has popup window opened
Test steps	1. Click “Kreiraj objekat” 2. Enter all data needed 3. Click “Kreiraj” button
Expected result	New object has been created
Status	POST https://www.navigators.ba/places/ 500 (Internal Server Error) / Failed

Test Case ID / Type of test	Send_Feedback / Positive
Description	Testing the sending of the feedback
Preconditions	User has opened feedback popup
Test steps	1. Click “Predlozi ideju” 2. Enter all data needed 3. Click “Posalji” button
Expected result	Feedback has been sent.
Status	“Greška prilikom slanja poruke • Došlo je do neočekivane greške. Molimo pokušajte ponovo” / Failed

Test Case ID / Type of test	Find_Object / Smoke, Positive
Description	Testing of finding of an object
Preconditions	User searched for the object
Test steps	1. Enter the name 2. Click search button 3. Locate the correct object
Expected result	Correct object has been found
Status	Correct object has been found / Passed

Test Case ID / Type of test	Test_Navigator_LandingPage / Smoke, Positive
Description	Testing of returning to main/ landing page
Preconditions	User has clicked the icon in the top left.

Test steps	1. Change the view from the main page 2. Click icon in the top left 3. Load on the main page
Expected result	Returned to the main page
Status	Returned to the main page / Passed

Test Case ID / Type of test	Page_Load / Smoke, Positive
Description	Testing creating of a loading of the page
Preconditions	User has opened the page
Test steps	1. Open the page 2. Wait for it to load
Expected result	Opened web page
Status	Opened web page / Passed

Test Case ID / Type of test	Categories_Functionality / Smoke, Positive
Description	Testing object categories functionality
Preconditions	User has chosen the desired category
Test steps	1. Choose desired category 2. Verify it has opened the given category 3. Choose desired object 4. Visually verify it has opened the desired object
Expected result	Finding the correct objects in correct category, where objects are having correct data.
Status	Finding the correct objects in correct category, where objects are having correct data. / Passed

Test Case ID / Type of test	SocialMedia_Icon / Positive
Description	Testing the social media icons
Preconditions	User has clicked the desired icon
Test steps	1. User has opened the page 2. User has clicked the desired social media icon

	3. The given social media profil of the system has been opened 4. Visually verify it has opened the desired social media
Expected result	Opening the correct social media account.
Status	Opening the correct social media account. / Passed

Test Case ID / Type of test	GooglePlay_Icon / Positive
Description	Testing the google play icon.
Preconditions	User has clicked the google play icon
Test steps	1. User has opened the page 2. User has clicked the google play icon in the bottom right 3. The given link opens up a correct page in google play store
Expected result	Opening the correct google play page.
Status	Doesn't open the correct page, with the message: "Zatraženi URL nije pronađen na ovom poslužitelju." / Failed

Test Case ID / Type of test	Long_Input / Negative
Description	Testing of how the web page handles long inputs to its search bar.
Preconditions	User has entered long string in the search bar.
Test steps	1. Open the page 2. Input long string 3. Click search icon
Expected result	The page will handle the input normally, without crashing/freezing.
Status	The page handled the input normally, without crashing/freezing. / Passed

Test Case ID / Type of test	Create_Object_With_MissingData / Negative
Description	Testing the creating of an object with missing data. The system should point out to the user that something is missing.

Preconditions	User has popup window opened
Test steps	1. Click “Kreiraj objekat” 2. Do not enter all the data needed 3. Click “Kreiraj” button
Expected result	New object has not been created
Status	“Forma sadrži nevalidne podatke. Molimo ispravite i pokušajte ponovo” / Passed

5. Steps for bugs reproduction

- Create_Object

For Create_Object test, what I did to produce this bug was to open the popup for creating, enter the needed data in the form and click ‘Kreiraj’ button. After doing that I got the error message mentioned above in the table.

- Send_Feedback

For Send_Feedback I opened the ‘Predlozi ideju’ popup, and entered the required data into the popup. I tried also changing the type of feedback message in the radio buttons that are offered, but that didn’t make the difference. I got the error message that I mentioned in the table.
